DETAILED ACTION

Election/Restrictions

1. Claim 1 is withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected invention, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on 6 July 2004.
2. The traversal is on the ground(s) that the claim as amended is now directed to the same invention as claim 21. This is not found persuasive because claim 1 does not require the method of algorithm generation as set forth in claim 21, and claim 21 has additional use as a method of algorithm generation. The requirement is still deemed proper and is therefore made FINAL.

Double Patenting

3. Claims 21-37 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-19 of U.S. Patent No. 6,615,656 in view of Doty. Note that the claims recite an IMU not disclosed in the parent applications, and therefore have an effective filing date of 09/09/2003. The invention is disclosed in claims 1-19 of the '616 patent except for the use of an IMU having 3 accelerometers and 3 gyroscopes. Doty teaches an IMU having 3 accelerometers and 3

gyroscopes for use in vehicle pitch and roll determination; see entire document particularly abstract and column 4. It would have been obvious to one having ordinary skill in the art at the time the invention was made to use an IMU having 3 accelerometers and 3 gyroscopes as taught by Doty in the invention recited in the claims of the '616 patent to act as the pitch and roll transducer, since Doty teaches that it is a low cost alternative for vehicle attitude sensors.

Conclusion

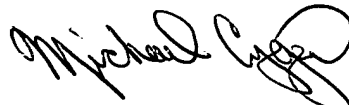

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Rush (US 3,361,897) and Cohn (US 3,463,980) disclose attitude correction through computation for vehicle fuel level.
